Aluminum Alloy for High Temperature Applications

A novel low cost cast aluminum alloy offers dramatic strength at high temperatures

NASA's Marshall Space Flight Center originally developed a high-performance piston alloy to meet U.S. legislative restrictions on vehicular exhaust hydrocarbon emissions. NASA 398 aluminum alloy exhibits excellent tensile and fatigue strength at elevated temperatures. NASA 398 alloy also offers superior wear resistance, surface hardness, dimensional stability, and lower thermal expansion compared to conventional aluminum alloys. NASA 398 has been used in mass production and has enabled award-winning and innovative commercial products, and the NASA Marshall Technology Transfer Office is seeking new licensees that may also benefit from its adoption.
THE TECHNOLOGY

NASA 398 is an aluminum-silicon hypereutectic alloy (16% w. Si) with a microstructure that consists of small polygonal primary silicon particles evenly distributed in an aluminum matrix. The alloy can be utilized in automotive applications with high mechanical loading at elevated temperatures from 500 °F (260°C) to 700 °F (370°C), and can offer significant improvements in strength relative to most conventional aluminum alloys.

Material physical and mechanical properties for NASA 398-T5 (permanent mold) are provided in Table 1 below. Additional information is available on request and at the following website:

APPLICATIONS

The technology has several potential applications:

- Internal combustion engines and high temperature components such as pistons, manifolds, brake calipers, cylinder heads, and heat exchangers.
- Applications requiring light-weight, high-strength, and wear-resistant alloys at elevated temperatures.
- Potential replacement for cast titanium and iron-based alloys to reduce part weight and cost

PUBLICATIONS

Marshall has received several patents for protection of NASA 398, including:

- U.S. Patent No. 6,918,970
- U.S. Patent No. 6,669,792
- U.S. Patent No. 6,592,687
- U.S. Patent No. 6,419,769
- U.S. Patent No. 6,399,020
